(54) CLIENT-SIDE PROGRAM MANAGEMENT METHOD IN CLIENT-SERVER SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To automate the management and maintenance of client programs and their transaction terminals only by management by a table and to manage programs and terminal constitutions by transactions at one place by performing program manages by the transactions and managing the terminal group.

SOLUTION: A server 10 has the management table 17 which manages the programs by the transactions and the terminal group unitarily. Further, the server 10 has a table managing means 13 which reflects inputted instruction information on the management table 17 and recognizes change items of the management table 17 after last update at the time of current item, a transfer judging means 14 which determines a client program to be transferred and a terminal or a program to be

deleted and its object terminal according to the change items reported by the table managing means 13, and the management table 17, etc. A client 20 is equipped with a program receiving means 21 which receives and stores a program in a file. This management method performs the program management by the programs and manages the terminal group at the same time.
